

# Behind all the Fun Count on our Engineering Creativity

**Best  
Waves**

**Best  
Flow**

**Best  
Spray**

With over 56 years of worldwide expertise in the waterpark industry, API WATER FUN has a rich history of innovation, having introduced the very first Pneumatic Wave Generator in the world back in 1968.

We specialize in high-capacity water attractions for your waterpark, including WAVES, WILD RIVERS, and SPRAYPARKS. All our products are designed and manufactured in-house in Germany, ensuring the highest quality standards. Our dedicated, reliable and punctual API team installs and services these attractions around the world, 12/365 available, ensuring that you have the assistance always by your side. We pride ourselves on offering professional support from pre-planning to opening.

## Understanding

Every project begins with a deep understanding of the situation. We start by listening carefully and assessing the circumstances to grasp the project scope and find creative, practical solutions tailored to each client's unique operational needs. This involves considering the target audience as well as the structural characteristics of your facility.

The structural characteristics include topographical and architectural features that influence the design of your waterpark. We collaborate on the optimal arrangement and zoning of your waterpark within your master plan or renovation project, ensuring that all perspectives, including the flow of guests and the layout of the attractions are taken into account.

We address both active capacity (the number

of guests playing at the same time) and passive capacity, which involves designing additional areas for non-playing guests who enjoy watching the activities while possibly consuming refreshments.

## Customized design and engineering

Our innovative proposals follow an approach that maximizes the experience in terms of diversity, capacity, safety, and entertainment. Our expertise in the overall planning and design allows us to provide product selection recommendations that maximize capacity and operational efficiency while appealing to a wide range of guests.

As part of the preliminary project, we will create a water-animated film for you. A 3D animation based on our design program and a budget proposal will complete our offering.

## Manufacturing in house and Realizing

In line with our motto, "Behind all the Fun. Count on our Engineering Creativity," we combine the creative vision of our design with precise implementation and careful manufacturing to provide the waterpark that you can rely on for decades. Our project management, manufacturing, and construction adhere to the highest quality and safety standards in the industry.
