Downhill, from age 8 to 80, for small footprints (e.g. 47m length of track on 10x10m footprint) in freeflow operation

Lindau, Germany

API SPRAYPARKS®

Colourful PLAY and SPRAY ATTRACTIONS for your customized SPRAY-PARK are mounted on a colourful, grippy and water tight SAFE PLAY and SPRAY FLOOR® from API.

The creative combination of various highly interactive PLAY and SPRAY ATTRACTIONS is summarized under the term API SPRAYPARK. The API SPRAYPARK is safe and sustainable.

Safety is assured by API's perfectly draining and grippy SAFE PLAY and SPRAY FLOOR with no standing water thus no danger of drowning accidents.

Sustainability is assured by durability of API's PLAY and SPRAY ATTRACTIONS which are made of recyclable stainless steel (grade 316L) with a colourful multiple layer powder coating, the last layer of which protects against UV radiation.

Cool and surprising water effects are triggered and controlled by the child's hand and offer a wide range of water play and spray options. Customized and themed designs for age group 1 to 5 years and group 5 to 12 years are available.

API TOUCH & SPRAY

Touch here (by foot or by hand)
– spray there

LED FUN JET 3.0

LED-illuminated water fountain

API SEESAW and SPRAY®

seesaw and spray your neighbour -
the wetter the better

API PLAY and SPRAY FLOOR

Non-slip, coloured, waterproof

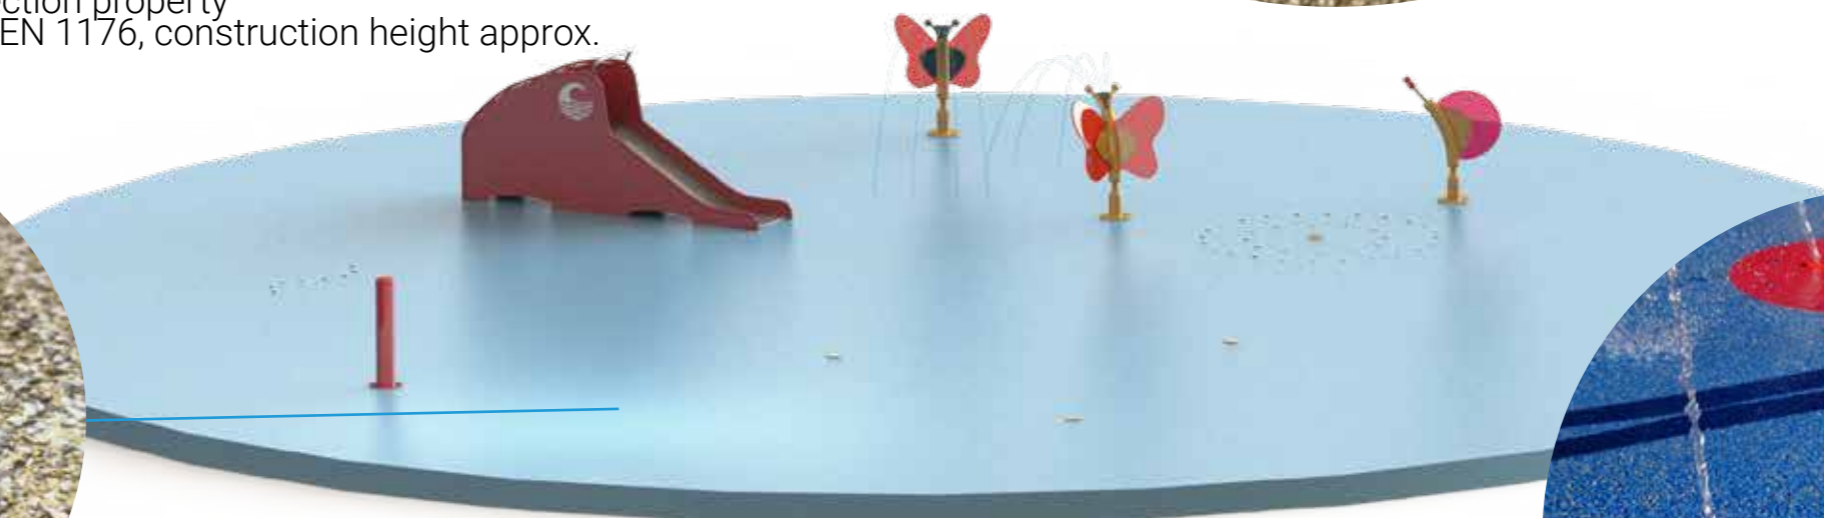

made by hand and on site with a construction height of approx. 13mm.

It is:

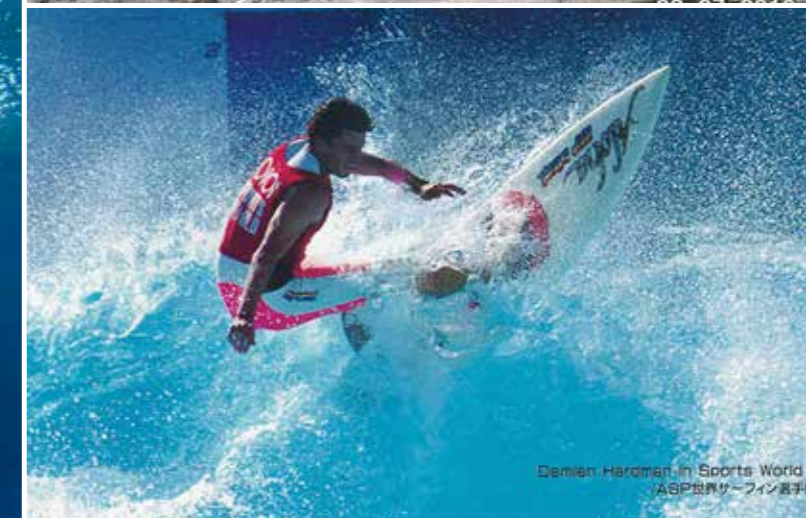

- waterproof,
- surface-tight (not in the sense of DIN 18531 ff.),
- non-slip (slip-resistance class C, DIN 51097),
- resistant to chlorinated bathing water (treated according to DIN 19643 with 0.3 to 0.6mg/l free chlorine),
- large-scale multicoloured according to customer requirements,
- resistant to UV radiation and abrasion
- easy cleaning and problem-free repair of damaged areas,
- individual components used free of harmful substances according to EN 71-3
- optional, with certified fall protection property (HIC < 1.000)* according to DIN EN 1176, construction height approx. 103mm

**Best
Spray**

**Best
Spray**

**) DIN EN 1176-6 requires a shock-absorbing floor with a HIC value < 1,000, for free fall heights of 0.60 to 3.0m. The shock-absorbing property of the flooring is determined in tests with the help of the HIC (Head Injury Criterion) value, an international key figure for the severity of a head injury. The lower the HIC value, the better the head is protected. With a HIC value of 1,000, the risk of life-threatening injuries is 15 %. With a HIC value of 2,000, the risk is 90 %.*
